

GEOTEXTILE

1- NON WOVEN POLYPROPYLENE GEOTEXTILE

PRODUCT DESCRIPTION

Non-woven geotextiles are a type of geotextiles which are manufactured in the form of sheet or web of directionally or randomly oriented fibers produced by mechanical and/or thermal and/or chemical bonding. Non-woven geotextiles have high permeability and high elongation characteristics.

Nonwoven Polypropylene Geotextiles are nonwoven needle-punched geotextiles made of 100% polypropylene staple fabrics. The nonwoven PP geotextiles are used in a wide variety of applications in the environmental and general civil markets, such as roadway construction, sports construction project, landfill separation and drainage and coast protection.
